COVID-19 Update No. 19

This alert updates the 25 March 2020 COVID-19 ALERT.

- The 25 March GP Info Sheet incorrectly omitted interstate arrivals from the suspect case definition. Today's attachment has corrected this. We apologise for any confusion this caused.
 - See the attached GP Info Sheet (v10), for the updated suspect case definition and testing criteria.
 - Please refer all patients meeting the suspect case definition for testing. If they are very unwell, organise for them to be reviewed in an Emergency Department, through the Medical Officer in Charge.
 - GPs can refer patients directly for sample collection at regional THS respiratory clinics.
 - GPs are no longer expected to phone Public Health Services / CDPU to notify of patients being tested for COVID-19. Notification is achieved by the completion and faxing of a Referral for Testing form to the THS Respiratory Clinic / private pathology providers. Please ensure the required details are included on the Referral for Testing form.
 - CDPU clinical staff can still provide advice on testing if required.
 - Staff at the respiratory clinics will phone referred patients to arrange appointments for sample collection. At the clinics, patients will be re-screened against the criteria for testing and basic observations will be taken. A referral does not guarantee sample collection, and samples will not be collected to diagnose other conditions.
 - Please ensure people referred for testing receive information and facemasks and that they understand their obligation to remain in self-isolation until notified of their test result.
 - See the Tasmanian Health Pathways for COVID-19: [Tasmanian HealthPathways](#) (username: connectingcare and password: health) for more information about the referral pathway and general practice preparedness.
 - Six Tasmanian cases were diagnosed on Wednesday 25 March. The total number of cases diagnosed in Tasmania is now 42. **All Tasmanian cases are linked to international travel and/or cruise ships.**
 - Public Health Services has loaded new PPE instructional videos for healthcare workers, go to www.dhhs.tas.gov.au/publichealth/tasmanian_infection_prevention_and_control_unit/healthcare_worker_education/pr_oper_use_of_personal_protective_equipment.
-
- The Prime Minister has announced that, from 26 March, all non-urgent elective surgery will be suspended. Only Category 1 and some exceptional Category 2 surgery will continue for now.
 - For national updates, go to www.health.gov.au. For state updates go to www.coronavirus.tas.gov.au
 - Nationally, as at 3:00 pm 25 March, there had been 2,423 (an increase of 287 cases in 24 hours) cases confirmed nationally, with local community transmission underway in NSW and Qld, and starting in Vic and SA. There have been 12 deaths and more than 169,000 tests completed.
 - The current focus of the public health response remains to delay the start of community transmission in Tasmania.
 - **Appropriate and rational use of medical supplies, including PPE and test kits, is essential** to protect supply.
 - The Australian Government is enabling vulnerable GPs and other vulnerable health professionals who are authorised to use telehealth item numbers, to use telehealth for all consultations with all their patients.

What to do:

- Review Primary Health Tasmania's newly developed Tasmania Health Pathway for COVID-19.
- **Use the COVID-19 GP Info Sheet V10 when managing suspected cases.**
- Monitor your own health, being alert to signs and symptoms of COVID-19.
